

Every club in your portfolio. *One member record.*

Clubhouse360 runs a multi-club golf and country club operation on one platform, from the first website visit to the 18th green: club websites, online join, membership sales, e-signed contracts, dues, onboarding, the member app, the tee sheet, the pro shop, events and reporting.

Club technology was assembled one club at a time. Multi-club operators inherit the result.

Every hand-off between systems is a place where data is re-keyed, prices drift, prospects fall through the cracks, and the controller spends the first week of every month reconciling.

TEE SHEET & POS

From one vendor, with its own member list to keep in step.

BACK OFFICE

From another, often a different product generation.

WEBSITES

An agency per club, with prices that drift from the back office.

SALES & CONTRACTS

A separate CRM and a separate e-signature tool.

THE PORTFOLIO

Reciprocal access in a spreadsheet; a nightly export to accounting.

From first enquiry to first round, on one member record.

The price on the website is the price in the back office

Promotions, director-sold plans and online plans are read from one price book by the website, the join flow and the Director's product builder.

Nobody pays before they sign

The contract is signed against the exact version shown, and the server refuses payment until it is, online and in a Director's in-person checkout.

A benefit is used up when it is used

Booking a tee time draws down the allowance the member saw while booking, across every club they can play.

A lead cannot be lost

Unclaimed enquiries escalate, idle deals return to the pool, nurtures come back on their date, and guest rounds turn into leads.

1

member record shared by every module and every club

6

steps from "Choose a plan" to a signed, paid, active membership

400+

permissions, grantable per role or per person, per club

0

data re-keyed between sales, contracts, billing and the member record

Everything the club runs on, in one login.

Around 250 purpose-built screens across the staff back office, the member portal and platform administration. Each module switches on or off per club.

Club websites & online join

A branded site for every club, live plans from the back office, and a six-step join with e-signature and payment.

Dues, billing & payments

Card and ACH autopay, prorated first periods, automatic retries and a compliant credit-only card fee.

Tee sheet & golf operations

Rate grids, booking windows, cart sheet and fleet, and seven golf staff roles.

Reporting & the corporate view

Reports that run as the viewer: a GM sees their club, a VP their region, corporate every club.

Membership sales CRM

Shared lead pool with escalation, pipeline by stage, tour board, discount authority and approvals.

Onboarding

Active the moment they pay, with reminders and a task for the GM and Director if a member stalls.

Pro shop & online store

Inventory kept as a ledger across clubs, and orders waiting on the member's cart.

Benefits & reciprocal access

Quantified benefits with resets and caps per club or per network, drawn down automatically.

Contracts & e-signature

Versioned templates, state-based clauses, countersignature, and payment blocked until signed.

Member portal & golf app

Digital card for every household member, benefits remaining, bills, bookings and scorecards.

Events & private events

RSVP, a private-events sales pool, and first-and second-option room holds.

Accounting PREVIEW

A general ledger fed by the club's own transactions. Interface complete; engine being merged.

The day tee sheet, with booking windows, rate grids and cart assignment.

Utilization, average ticket and revenue per available tee time, from the bookings.

— CONTROL & SWITCHING WITHOUT RISK

Everyone sees exactly their slice, and nothing switches on a guess.

Isolation enforced in the database

Row-level security on every table: a club's staff cannot query another club's records.

Nothing important can vanish

Field history, an audit log of staff actions, and a 30-day recycle bin. Members and anything with money or signatures behind it can never be deleted.

No club goes live on a guess

A readiness checklist, item by item. Defaults are previewed first and never overwrite what a club has customised.

A permission for every capability

400+ permissions per role and per club, per-person grants with an expiry and a reason.

Nothing switches all at once

Modules turn on per club, so each club moves at the pace you set while the rest carry on as today.

Search rankings carry over

Permanent redirects from each club's old web addresses keep the traffic your sites have earned.

— GETTING THERE

Rolled out club by club, on a checklist.

1

A 30-minute walkthrough

A live multi-club demo portfolio, mapped to how your clubs run today.

2

Map your portfolio

Clubs, regions, plans, benefits, roles and approval authority, in settings.

3

Stand up each club

Each club's site, roles and routing come from a template club.

4

Go live on a checklist

Pass or fail for every item, and redirects for every old web address.

More clubs. *Not more systems.*

See one member record carry a prospect from your website to a signed, paid membership, and on to their first tee time.

Accounting is in Preview. Court booking and a point-of-sale till are on the roadmap. Screens show a sample portfolio; clubs, people and figures are sample data.
